

## AT A GLANCE

- Acts as or supplements your CISO function
- Access to a team of expert consultants & engineers
- Help toward industry certifications
- Access via telephone, email or support portal
- Plan out a coherent cyber security strategy
- Turn your CISO into a CISO team

## SEP2 Team CISO

Chief information security officers (CISOs) are highly sought-after professionals, to the point where good ones are expensive, and hard to come by. Some organisations also struggle to justify a Full Time Equivalent (FTE) in this role and therefore it is often resourced by allocating this role to an individual whose primary role or experience is not Information/Cyber Security, too busy to provide the dedication the role requires or does not have the necessary experience the role requires.

Other organisations might be in between CISOs while the business is transitioning or adding a focus on other business needs.

Team CISO could be your answer.

Team CISO is a service where an experienced SEP2 information security practitioner is assigned to you to offer your organisation the role of a CISO. They will offer their time and insight to an organisation on an ongoing basis, part-time and remotely.

SEP2 assign a CISSP certified lead consultant, who is backed by a team of security professionals, providing you with the role, on a part-time basis, of a CISO. Providing you with a lead consultant gives you the comfort of a single point of contact, while still knowing that there is a breadth of knowledge within the team of CISOs who will be involved in 'mini-projects' and discussions of your account.

## Tech Driven, People Powered

While this is a human-based service, it can be beneficial to implement technology tooling based on your goals of this role. Whether you require a GRC tool such as KnowBe4 KCM, or a security point solution such as Qualys; SEP2 work with best in breed technology to make recommendations, or implement the strategy and reporting your organisations requires.

### Why vCISO?

- Lower cost of entry to experienced consultants
- Kick starts your CISO function with proven expertise
- You don't need a dedicated CISO
- There is a specific compliance you must hit
- You need assistance responding to a cyber security incident

## Service Features and Benefits

SEP2 can provide you with the Team CISO role as a service where the product is the expertise of a team of consultants. Whether this is a stop-gap solution, or a long-term vision of providing the CISO role in your organisation, SEP2 will work tirelessly to improve your security posture and reacting to security incidents as and when they occur.

Whether you are looking to align to industry certification standards such as Cyber Essentials, ISO27001/2 or PCI-DSS, SEP2 will work with the organisation security strategy to make sure your organisation is best protected.

## Our Accreditations

SEP2 has achieved certification to the International Standards Organisation (ISO) 27001 framework for Information Security Standard.

Being certified to the ISO27001 standard proves that SEP2 take information security seriously and can be trusted to handle their own and their customer data securely.

As well as achieving the highest level of vendor specific certification and accreditations, SEP2 also recognise the importance of industry certifications and standards such as (ISC)2 Certified Information Security Systems Professional (CISSP), and have many staff certified at this level.

## Who are SEP2?

SEP2 are an award-winning cyber-security specialist.

We align ourselves with world-class cyber-security vendors, whose solutions cannot be bettered. However, only by supporting our customers with the very best engineers, analysis and consultants can we get the best out of these solutions.

This is why we say: SEP2 offer a tech-driven service powered by passionate and honest people.

We are here to beat the bad guys. We're here for good.
